THE CATALOGUE OF ELECTIVE SUBJECTS

7M06110-INFORMATICS

year of entry - 2022

Considered and approved at the meeting of educational-methodic Council of the faculty Minutes No. 5 from 10.05 2012 (Shorbakova E.O.)

Approved at the meeting of EMC of the 4 priversity Minutes No. 5 from 12.9 Ob. 79122 (Shorbakova E.O.)

The chairman of EMC of the University ON-object of the University On-ob

Nº p/p	Name of discipline	Number of credits	Prerequisites	Postrequisites	Short description of the content, the aims of education, expected results (knowledge, abilities, skills, competencies)
				c disciplines	
1	Methodological foundations of scientific research and experimental planning in computer science	5	World information resources	Modern project management technologies, Cryptographi c Information Protection	Content: The discipline is the formation of a system of knowledge about the theoretical and methodological foundations of research activities and about the main components of the research process. Development of the ability to use basic theoretical knowledge in scientific experimental research, analytical and teaching activities. Formation of ideas about the need to implement the results obtained in production, science and education. Expected result: to know: fundamentals of the methodology of scientific research (methodology of science, methodology of scientific activity) as a teaching about the organization of scientific activity; methods and methods of modern scientific knowledge in the professional field; methods of designing, organizing, evaluating and correcting experimental and research activities at various stages; be able to: identify promising areas of scientific research in the subject area of professional activity, the composition of research papers, their determining factors - to build the logic of empirical experimental research, collection, processing and interpretation of the data obtained on the material collected for their scientific research; to choose the necessary research methods, modify existing ones based on the objectives of a specific study, interpret the results of experimental research; formulate your own position based on the objectivity of theoretical assumptions and experimental data; process the results obtained, analyze and comprehend them taking into account the available data, use the knowledge of ethical norms when assessing the consequences of your professional activity. possess: terminology of scientific research; modern methods of scientific research in the subject area; skills of hypothesis formulation, selection of necessary research methods; skills of collecting, processing and interpreting the data obtained; ways of understanding and

					critical analysis of scientific information. Competencies: 1. General professional competencies (GPC 1): - the ability to improve their professional activities in the field of computer science and science, prospects and trends in the development of information technology; 2. professional (research) competencies (PC 1): - ability to plan, organize and conduct scientific research in the field of computer science; conduct correct processing of experimental results with their further presentation in the form of scientific reports, reports, publications and presentations;
1	Basic research	5	World information resources	Project management vethods, Information security technologies	Content: Engineering creativity. Creativity in scientific and design work. Overview of methods of technical creativity. Methods of scientific research in engineering. General information about scientific research. Classification of research methods. Feasibility study and research. Information and patent search. Setting up an experiment. Systematization of information. Research planning. An experiment in research. Mathematical processing of experimental results. Registration of research results. Approximation of the experimental results. Expected result: to know: the basic logical methods and techniques of scientific research, methodological theories and principles of modern science, the basis of modern computer technology, criteria for the dependence of features and data uniformity, criteria for the significance of parameters, principles of choosing the most powerful criteria. be able to: carry out methodological substantiation of scientific research, evaluate the effectiveness of scientific activity, use network technologies and multimedia in education and science; choose criteria parameters depending on product quality requirements and production costs, formulate a research task based on production needs, identify distribution functions, justify criteria parameters. possess: logical and methodological analysis of scientific research and its results, application of mathematical methods in technical applications, implementation of patent search, planning of scientific experiment, skills of public speech, argumentation, discussion and polemic, skills of cooperation and negotiation. Competencies: 1. General professional competencies (GPC 1): - the ability to improve their professional activities in the field of computer science and

Technologies of teaching specialty disciplines Technologies of teaching specialty disciplines Methodological basis of scientific research and experiment planning in computer science course independent planning in computer science and communication technologies and technologies of teaching specialty disciplines Methodological basis of scientific research and experiment planning in computer science becomes and an accommunication technologies in the university; be able to: develop thematic and lesson plans, develop didactic material for the lesson; possess; independent analysis of the process of teaching computer science and computer cycle disciplines, independent planning and technologies in development of laboratory and practical work on modern educational and methodological support for teaching computer and technological support for the activities of students in the educational process and extracurricular activities; in modern information and communication technologies for the creation, formation and administration of electronic educational resources and software and technological support for the activities of students in the educational process and extracurricular activities; in modern information and communication in the educational process and extracurricular activities; in modern information and communication in the educational process and software and technologies support for the first planting in the educational process and software and technologies process and software and technologies in the educational process and software and technologies in the educational process and software and technologies in the educational process and alboratory workshops using modern educational resources; in assessing the quality of electronic educational resources and software and technologies; plan and organize the independent work of students. Information Information Methodological basis of the process of teaching competer educational resources and software and technologies plan and organize the independent work of s						science, prospects and trends in the development of information technology; 2. professional (research) competencies (PC 1): - ability to plan, organize and conduct scientific research in the field of computer science; conduct correct processing of experimental results with their further presentation in the form of scientific reports, reports, publications and presentations; substantiation of conclusions and conclusions.
Information 2 Methodological 5 Smart technologies in 5 basis of technologies training (reading classroom electronic lectures	2	teaching specialty	5	basis of scientific research and experiment planning in computer	information systems and	pedagogical foundations of the structure and content of the general computer science course, methods, tools, technologies and organizational forms of teaching computer science at the university. As well as the formation of a system of competencies in the use of information and communication technologies in educational and cultural activities. Expected result: to know: the main normative and legal documents on higher education in the Republic of Kazakhstan, the main methodological and technological methods of teaching at the university; be able to: develop thematic and lesson plans, develop didactic material for the lesson; possess: independent analysis of the process of teaching computer science and computer cycle disciplines, independent planning and development of laboratory and practical work on disciplines, the use and development of modern educational and methodological support for teaching computer science be competent: in providing computer and technological support for the activities of students in the educational process and extracurricular activities; in modern information and communication technologies for the creation, formation and administration of electronic educational resources in assessing the quality of electronic educational resources; in assessing the quality of electronic educational resources and software and technological support for their implementation in the educational process. Competencies: 1. professional (pedagogical: teaching) competencies (PC 4): - the ability to independently conduct lectures, seminars, practical classes and laboratory workshops using modern educational technologies; plan and organize the
	2		5	_		Content: Information technologies in contact
	2	technologies in teaching	5		in education	

			research and experiment planning in computer science		information technology). The technical component of modern contact training. Principles, technologies and means of creating electronic content and electronic educational and methodical publications. Organization of a virtual educational space (distance learning). Automated distance learning systems. Educational and scientific site construction. Expected result: to know: the theoretical foundations of the
					culture of thinking and the features of its functioning in the professional activity of a teacher in the field of information technology in education; psychological features of human perception of information. be able to: analyze and summarize information in the logic of traditional forms of scientific knowledge in the field of information technology in education; use theoretical thinking to solve current problems and tasks in
					the field of information technology in education. possess: techniques of theoretical thinking as a way of mastering reality and practical activities in the field of information technology in education; skills of developing their own ways of thinking that meet the requirements of human culture in the field of information technology in education. Competencies:
					 professional (pedagogical: teaching) competencies (PC 4): the ability to independently conduct lectures, seminars, practical classes and laboratory workshops using modern educational technologies; plan and organize the independent work of students.
3	Modern pedagogical technologies	5	Technologies of teaching specialty disciplines	Writing dissertations	Content: Pedagogical technologies. Classification of pedagogical technologies. Traditional and innovative pedagogical technologies. Modern educational technologies as an objective need. Technologies of personality-oriented learning. Critical thinking technologies. Case technologies. Technologies of creative workshops. Technologies of problem-based learning. Computer (information) technologies. Technologies of programmed learning. Modular learning technologies. Integrated learning technologies. Expected result: to know: the concept of pedagogical technology, its structure, the methodology of pedagogical technology and the peculiarities of the use of pedagogical technology in the educational process. be able to: design, predict and design
				6	pedagogical technologies in professional pedagogical activity; apply pedagogical

modern school. own: creative use of new technologies in professional activity. Competencies: 1. professional (pedagogical: teaching) competencies (PC 4): - the ability to independently conduct lectures, seminars, practical classes and laboratory workshops using modern educational technologies; plan and organize the independent work of students. Content: The subject and objectives of pedagogical ethics. The origin and interrelation of the concepts of "ethics", "morality", "etiquette"; functions and ethical principles of pedagogical communication; the teacher's communication style and its influence on the training, upbringing and development of the student's personality; the concept of communication, its features, styles, forms; ethics of relations in the system of "teacher-student", "teacher-administration"; Features and possibilities of remote communication; The image of a teacher as a guarantee of professional success. Expected result: to know: historical aspects of the formation of ethics as a science; theoretical foundations of ethics, its conceptual and categorical apparatus; be able to: apply ethical norms and standards		1	1	1		T
professional activity. Competencies: Paper professional professional activity. Competencies: Paper professional professional activity. In professional professional altaboratory workshops using modern educational rechnologies: plan and organize the independent work of students. Content: The subject and objectives of pedagogical efficies, "morality", "morality", "etiquette", functions and ethical principles of pedagogical communication: the teacher's communication style and its influence on the training, upbringing and development of the students personality; the concept of communication style and its influence on the training, upbringing and development of the students personality; the concept of communication style and its influence on the training, upbringing and development of the students personality; the concept of communication in Features sayles, forms: ethics of relations in the system of "teacher-student", "teacher-administration"; "Teatures and possibilities of remote communication: The image of a teacher as a guarantee of professional success. Expected result: to know: historical aspects of the formation of ethics as a science; theoretical foundations of ethics as a science; theoretical foundations of ethics, its conceptual and categorical apparatus; of ethics and associated apparatus; of professional ethics of a specialist; methodological approaches to the choice of professional ethics of a specialist; methodological approaches to the choice of theoretical tools appropriate to the task being solved; culture of communication in professional ethics, its conceptual apparatus of professional ethics, its conceptual apparatus of professional ethics, its conceptual apparatus of professional ethics of a specialist; methodological approaches to the choice of theoretical tools appropriate to the task being solved; culture of communication in professional ethics, its observe pedagogical ethics; to show respect for the personality of students; to adhere to a democritical style in relations with students; t						
1. professional (pedagogical: teaching) competencies (PC 4): - the ability to independently conduct lectures, seminars, practical classes and laboratory workshops using modern educational technologies; plan and organize the independent work of students. Content: The subject and objectives of pedagogical elities. The origin and interrelation of the concepts of "ethics", "morality", "incitiquette"; functions and ethical principles of pedagogical clinics. The origin and interrelation of the concepts of "ethics", "morality", "incitiqueste"; functions and ethical principles of pedagogical communication, its features, styles, forms; ethics of relations into system of "eacher-student", "escher-teacher-", "leacher-administration"; "Features and possibilities of remote communication; The image of a teacher as a guarantee of professional success. Expected result: to know, historical aspects of the formation of ethics as a science; theoretical foundations of ethics, its conceptual and categorical apparatus; independent of ethics are as a conceptual and categorical apparatus; apparatus; of expected result: to know, historical aspects of the formation of ethics, as science; theoretical foundations of ethics, its conceptual and categorical apparatus; of ethics, its conceptual apparatus of ethics, its conceptual apparatus of ethics, as science; theoretical fools appropriate to the task being solved: culture of communication in professional professional ethics of a specialist; methodological approaches to the choice of theoretical tools appropriate to the task being solved: culture of communication in professional professional professional professional professional professional professional professional professional ethics of a specialist; methodological approaches to the choice of theoretical tools appropriate to the task being solved: culture of communication in professional professional ethics of a specialist; methodological approaches to the stake being solved: culture of communication in professional professional ethics						*
- the ability to independently conduct lectures seminars, practical classes and laboratory workshops using modern educational technologies; plan and organize the independent work of students. Content: The subject and objectives of pedagogical ethics. The origin and interrelation of the concepts of pedagogical ethics. The origin and interrelation of the concepts of "ethics." "morality", "incitiquestie"; functions and ethical principles of pedagogical communication; the teacher's communication is speamed and possibilities of remote communication; the students' personality; the concept of communication is features, styles, forms; ethics of relations in the system of "eacher-sudent", "teacher-teacher", "features and possibilities of remote communication: The image of a teacher as a guarantee of professional success. Expected result: to know: historical aspects of the formation of ethics as a science; theoretical foundations of ethics, its conceptual and categorical apparatus: be able to: apply ethical norms and standards in professional practice: independently navigate ethical problems and ways to resolve them; apply general moral norms and requirements of professional practice: independently navigate ethical problems and ways to resolve them; apply general moral norms and requirements of professional ethics in practice. Competencies: 1. professional (pedagogical: educative) competencies (PC 5): - the ability to observe pedagogical tact, the rules of pedagogical ethics; to show respect to show commitment to the highest of the task being solved; culture of communication: 1. professional (pedagogical: educative) competencies (PC 5): - the ability to observe pedagogical tact, the rules of pedagogical ethics to adhere to a democritical style in relations with students; to show commitment to the highest call values, to the ideas of humanistic pedagogy; to show respect to show commitment to the highest call values, to the ideas of humanistic pedagogy; to show respect to show commitment to the highest call values, to						1. professional (pedagogical: teaching)
workshops using modern educational technologies; plan and organize the independent work of students. Content: The subject and objectives of pedagogical ethics. The origin and interrelation of the concepts of "ethics", "morality", "retiqueter; functions and ethical principles of pedagogical communication; the teacher's communication style and its influence on the training, upbringing and development of the student's personality; the concept of communication, its features, styles, forms; ethics of relations in the system of "teacher-student", "teacher-teacher", "teacher-administration"; Features and possibilities of remote communication; The image of a teacher as a guarantee of professional success. 	<u> </u>	<u> </u>	I	1	7	provides of fundamentally to resist un types of

				n disciplines	discrimination, extremism; the ability to solve moral and ethical problems that may arise in pedagogical activity. 2. General professional competencies (OPK 2): - the ability to lead a collective in the field of their professional activities, tolerantly perceiving social, ethnic, confessional and cultural differences.
<u> </u>			Elective	e courses (EC	
1	Algorithms and their complexity	5	Algorithms and data structure	Interfaces of software systems	Content: The study of algorithms allows you to delve deeper into the problem and can suggest solution methods that do not depend on the programming language, programming paradigm, hardware and other aspects of implementation. An important component of knowledge in the field of computer science is the ability to choose an algorithm suitable for solving a given problem, or to prove that such an algorithm does not exist. This ability is based on knowledge of a class of algorithms that are designed to solve a certain set of known problems, understanding their strengths and weaknesses, and the applicability of various algorithms in this context. Efficiency is the most important issue in this area. Expected result: know: develop algorithms for specific tasks; find the complexity of algorithms; be able to: basic models of algorithms, methods of constructing algorithms, calculating the complexity of algorithms; to know: about methods of proving the correctness of algorithms for typical mass problems, about methods of proving the unsolvability of mass problems. Competencies: 1. professional (professional-activity) competencies (PC 2): - ability to understand the skills of using computer technology, programming tools for the effective implementation of hardware and software complexes and possession of practical skills of object-oriented analysis, design and programming;
1	Estimation of the complexity of algorithms	5	Algorithms and data structure	The life cycle of the software	the concept of algorithm complexity, measuring and evaluating algorithm complexity, effective algorithms for solving problems and evaluating basic algorithms for sorting and searching information. Consideration of the types of functions of complex algorithms and the mathematical apparatus of algorithm analysis. The study of the calculation of the number of operations performed, the asymptotic notation used in the analysis of the growth rate and the comparison

				1	of the complexity of algorithms
					of the complexity of algorithms. Expected result:
					to know: the complete set of initial data of the
					task (the initial state of the object); the purpose
					of creating the algorithm (the final state of the
					object); the system of commands of the
					performer (that is, a set of commands that the
					performer understands and can execute), the
					general solution of a large class of recurrent
					equations;
					be able to: use algorithm development
					methods; perform dynamic programming,
					search with return; use local search algorithms;
					possess: finding and using effective
					programming algorithms.
					Competencies:
					1. professional (professional-activity)
					competencies (PC 2):
					- ability to understand the skills of using
					computer technology, programming tools for
					the effective implementation of hardware and
					software complexes and possession of practical
					skills of object-oriented analysis, design and
					programming; Contents The discipline is the formation of the
					Content: The discipline is the formation of the necessary theoretical base and practical skills
					that will allow you to comprehensively and
					systematically see the stages and process of
					software development. The basic stages of the
					process of creating software systems are
					analysis and modeling (design). The main
					objective of the course is to form a holistic
					understanding of the methods and approaches
					of object-oriented analysis and design of
					software and hardware complexes, to help
					master the practical experience of
					programming in C++ and designing software
					products using the unified modeling language
					UML (Unified Modeling Language) in the
	Technology of		Algorithms		Rational Rose environment.
2	object-oriented	5	and their	Big Data	Expected result:
_	analysis and design		complexity	technologies	to know the evolution and brief description of
	,		1 3		the main approaches to the development of
					information models of business systems and
					business processes;
					be able to develop graphical notation and the
					specifics of its use in the process of creating scalable software systems
					to possess: analysis of requirements for
					automated information systems.
					Competencies:
					1. professional (professional-activity)
					competencies (PC 3):
					- possess knowledge of regulatory and legal
					documents in the field of IT technology,
					instructional documentation, skills and abilities
					to develop current technical documentation of
					a software product and system, possess
		•		9	

					organizational skills, show high performance
					discipline;
2	Analysis of requirements for automated information systems	5	Programming algorithm	Data processing and storage technologies	Content: The course contains information about the analysis of requirements as an engineering discipline. Classifications of requirements are given, properties of requirements are analyzed, methodologies, standards, notations, artifacts of working with requirements are considered. The components of the requirements analysis are analyzed in detail - identification, specification and documentation, verification. Expected result: to know: the concept and areas of application of automated information systems; fundamentals of software system design, principles of software testing; be able to: practically use modern software of modern computer technology; own: conducting an analysis of requirements for automated information systems. Competencies: 1. professional (professional-activity) competencies (PC 3): - possess knowledge of regulatory and legal documents in the field of IT technology, instructional documentation, skills and abilities to develop current technical documentation of a software product and system, possess organizational skills, show high performance discipline;
3	Cryptographic Information Protection	3	Methodologic al basis of scientific research and experiment planning in computer science	Writing dissertations	Content: Studying the discipline, undergraduates will master the fundamental principles of information protection using cryptographic methods and examples of the implementation of these methods in practice Expected result: to know: the concept and areas of application of automated information systems; fundamentals of software system design, principles of software testing; be able to: use the basics of cryptographic messages; mathematical models of cipher texts; know: about cryptanalysis of cipher models; about secret key management. possess: the skill of building cryptographic encryption algorithms and data transfer protocols. Competencies: 1. professional (professional-activity) competencies (PC 2): - ability to understand the skills of using computer technology, programming tools for the effective implementation of hardware and software complexes and possession of practical skills of object-oriented analysis, design and programming;
3	Information security	3	Basic	Thesis work	Content: Mastering disciplinary competencies
				10	

	technologies		research		related to the disclosure of basic and advanced information security technologies for complex
					technical objects and systems. Expected result:
					know: the structure of cryptographic messages; mathematical models of texts and ciphers;
					cryptanalysis of cipher models, secret key management; use basic cryptographic methods,
					protocols and algorithms;
					be able to: use basic cryptographic methods, protocols and algorithms; develop effective
					encryption algorithms.
					own: the structure of cryptographic messages; mathematical models of texts and ciphers;
					own: about cryptanalysis of cipher models;
					about secret key management. Competencies:
					1. professional (professional-activity)
					competencies (PC 2): - ability to understand the skills of using
					computer technology, programming tools for the effective implementation of hardware and
					software complexes and possession of practical
					skills of object-oriented analysis, design and programming;
					Content: Having studied the discipline,
					undergraduates will know: fundamentals of intelligent information systems; intelligent
					information systems; knowledge
					representation; expert systems; data mining; intelligent information systems; knowledge
					representation; fundamentals of programming
					in "prologue – d"; development of an expert system; data warehouse; associative rules.
					Forecasting. Expected result:
			The		to know: the theory of modern information
	Intelligent		technology of		technologies; methods, methods and means of obtaining, storing and processing information.
4	information systems	5	object- oriented	Writing dissertations	be able to: apply information technologies in
	and technologies		analysis and	dissertations	solving problems; use sources of economic, social, and managerial information.
			design		possess: information technology skills; modern
					methods of collecting, processing and analyzing economic and social data.
					Competencies:
					1. professional (professional-activity) competencies (PC 2):
					- ability to understand the skills of using computer technology, programming tools for
					the effective implementation of hardware and
					software complexes and possession of practical skills of object-oriented analysis, design and
					programming;
	Smart technologies	_	Analysis of the	Writing	Content: Having studied the discipline, undergraduates will know the paradigm of
4	in education	5	requirements	dissertations	smart education: principles and technologies;
			for automated	11	Smart technologies of collective learning: joint

			:f	<u> </u>	formation of advectional content and
			information		formation of educational content and
			systems		communication; open educational resources as
					the basis of smart education; development of a
					system of evaluation activities of an electronic
					course using smart education technologies.
					Expected result:
					to know: the concepts of information
					technology and programming; general
					principles of program development; the
					concept of the life cycle of an information
					system; characteristics of the main IP
					processes; LC models; features of analysis and
					design);
					be able to: carry out comparative analysis and
					design of CASE technology systems; work
					with various types of diagrams; work with
					elements of graphical notation;
					own: the development of multimedia software,
					the use of various technologies in the
					development of multimedia tools.
					Competencies:
					1. professional (professional-activity)
					competencies (PC 2):
					- ability to understand the skills of using
					computer technology, programming tools for
					the effective implementation of hardware and
					software complexes and possession of practical
					skills of object-oriented analysis, design and
					programming;
					Content: The discipline is the training of
					professional project managers in accordance
					with international and national requirements
					for the competence of project management
					specialists and modern trends and technologies
					of project activity, as well as the formation of
					the ability to analyze the need for the use of
					project management technologies at different
					stages of the project cycle; to assess the place
					and role of project management technologies
			Methodologic		in various areas of the modern economy and IT
			al basis of		sphere.
			scientific		Expected result:
	Modern project		research and		know: the tasks of the project manager at all
5	management	5	experiment	Writing	phases of the iterative-incremental software
	technologies	,	_	dissertations	development cycle, the methodology of using
	technologies		planning in		
			computer		PERT analysis to calculate the timing and
			science		budget of the project, typical risks of IT
					projects, their classification, risk management
					strategies, methods of monitoring the progress
					of the project;
					be able to: draw up a work plan (a network
					diagram of work flows), assess labor costs and
					calculation of the project budget, calculate
					realistic project deadlines by PERT analysis,
					conduct a risk analysis;
					possess: iterative-incremental software
					development cycle model, project planning and
					critical path, risk management in IT projects,
	<u>L</u>	<u> </u>		12	critical paul, fisk management in 11 projects,

					financial justification of the project, present value and payback, project configuration management. Competencies: 1. professional (professional-activity) competencies (PC 3): - possess knowledge of regulatory and legal documents in the field of IT technology, instructional documentation, skills and abilities to develop current technical documentation of a software product and system, possess organizational skills, show high performance discipline;
5	Project management methods	5	Basic research	Writing dissertations	Content: Project management history. A system of standards in the field of project management. Project, program. Classification of projects. Project goals and strategies. Project structures. Types and examples of structural project models used in the UP. The life cycle and phases of the project. Project management processes and functions. The concept of processes in project management. Basic and auxiliary processes in project management. Goal setting in projects. Calendar planning and organization of the project control system. Project risk management. Project personnel and communications management. Information technologies of project management. Expected result: to know: the modern methodology of project management, definitions and concepts of projects, programs and their context as objects of management; definitions and concepts of management subjects and tools used by them; history and trends in the development of project management; be able to: analyze the goals and interests of the project; determine the goals, subject area and structures of the project; possess: (methods, techniques) teamwork skills in projects; self-management techniques for simple projects; be able to effectively participate in team work in complex projects. Competencies: 1. professional (professional-activity) competencies (PC 3): - possess knowledge of regulatory and legal documents in the field of IT technology, instructional documentation, skills and abilities to develop current technical documentation of a software product and system, possess organizational skills, show high performance discipline;
6	Big Data technologies		Algorithms and their complexity	Writing dissertations	Content: The course "Big Data Technology" aims at: the formation of professional competence among undergraduates in the field of development and use of systems for processing and analyzing large amounts of

					data. This goal correlates with the purpose of
					the educational program, in particular, with the
					technologies for developing specialized
					software systems responsible for processing
					big data.
					Expected result:
					know: methods of analysis and storage of large
					amounts of data, stages
		5			the life cycle of big data processing, the
		3			languages most adapted for processing and
					analytics of big data, ways of organizing
					storage and access to big data;
					be able to: perform data analysis elements and
					interpret the results, distinguish between the
					characteristics of SQL and NoSQL databases,
					formulate algorithms in the MapReduce
					paradigm, choose a suitable big data analysis
					tool, choose a suitable big data storage
					technology.;
					possess: mathematical methods of data
					analysis, languages and computer processing
					methods.
					Competencies:
					1. professional (professional-activity)
					competencies (PC 2):
					- ability to understand the skills of using
					computer technology, programming tools for the effective implementation of hardware and
					software complexes and possession of practical
					skills of object-oriented analysis, design and
					programming;
6					Content: The course consists of two
					complementary parts. The first one tells about
					the methods of data storage in the
					infrastructures of a modern enterprise. Students
					receive information about the types of storage
					and the features of their application in classic
					and cloud environments of enterprises, learn
					about the architecture of solutions and basic
					algorithms underlying storage systems, and get
					an idea of SAN networks. The second part is
					devoted to the introduction to the problem of
			Estimation of		big data and the development of high-load
	Data processing and	_	the	Writing	services
	storage technologies	5	complexity of	dissertations	Expected result:
			algorithms		know: IT architecture of a modern enterprise in
			_		terms of systems that provide storage and
					processing of large amounts of data, knowledge of algorithms and techniques for
					working with highly loaded services.
					be able to: use modern data storage systems.
					The ability to analyze the architecture of a
					modern enterprise and data processing centers,
					to choose protocols and technologies for
					building the virtual infrastructure of the
					enterprise.
					own: methods for developing high-load
					services. Acquisition of skills to work with
<u> </u>			<u>l</u>	1/	The state of the s

					modern big data processing libraries. Competencies: 1. professional (professional-activity) competencies (PC 2): - ability to understand the skills of using computer technology, programming tools for the effective implementation of hardware and software complexes and possession of practical skills of object-oriented analysis, design and
7	Interfaces Software Systems	5	The technology of object-oriented analysis and design	Writing dissertations	Content: The content of the discipline covers a range of issues related to the design of user interfaces of software systems, the use of various methodologies and technologies for designing user interfaces of software systems. User interfaces in their relationship with application-level hardware and software interfaces. Models and metaphors. Concepts and interrelation. The mental model. Properties of mental models. Mental models of various participants in the process of developing and using software systems. Expected result: to know: features of the received estimates. methods of engineering-psychological and ergonomic design of human-machine systems; methods of system-wide design of interfaces for human-computer environment interaction, be able to: formulate requirements for hardware and software that ensure operator interaction with the computing environment; possess: make a choice and justification of design solutions for the organization of computer system interfaces. Competencies: 1. professional (professional-activity) competencies (PC 3): - possess knowledge of regulatory and legal documents in the field of IT technology, instructional documentation, skills and abilities to develop current technical documentation of a software product and system, possess organizational skills, show high performance discipline;
7	The life cycle of software support	5	Analysis of the requirements for automated information systems	Writing dissertations	Content: Ways to use them. The software lifecycle is considered in several phases. The software lifecycle includes all stages of the software: accordingly, the solution of tasks for certain purposes is considered. Ways to use them. The software lifecycle is considered in several phases. The separation of the program cycle is considered in several ways. Expected result: know: LC software; ways to use LC software; principles and technology of program cycle separation; be able to: work with LC software; use LC software when solving problems; perform the separation of the program cycle,

possess: develop automated information processing systems, databases using the stages and stages of program development, as well as perform software testing. Competencies: 1. professional (professional-activity) competencies (PC 3): - possess knowledge of regulatory and legal documents in the field of IT technology, instructional documentation, skills and abilities to develop current technical documentation of
to develop current technical documentation of a software product and system, possess
organizational skills, show high performance discipline;

LIST of elective courses for an educational program 7M06110 - INFORMATICS

Form of education: Full-time Studying term: 2 years

Year of entry - 2022

Name of the discipline	Code of discipline	Number of loans	Semester
Basic disciplines	l		
Elective course 1			
Methodological foundations of scientific research and experimental planning in computer science	MFSREP5206	5	1
Basic research	BR5206	5	1
Elective course 2			
Technologies of teaching specialty disciplines	TTSD5207	5	2
Information technologies in teaching	ITT5207	5	2
Elective course 3			
Modern pedagogical technologies	MPT6208	5	3
Pedagogical ethics of a modern teacher	PEMT6208	5	3
Main disciplines			
Elective course 1			
Algorithms and their complexity	ATC5303	5	2
Estimation of the complexity of algorithms	ECA5303	5	2
Elective course 2			
Technology of object-oriented analysis and design	TOOAD5304	5	2
Analysis of requirements for automated information systems	ARAIS5304	5	2
Elective course 3			
Cryptographic Information Protection	CIP5305	3	2
Information security technologies	IST5305	3	2
Elective course 4			
Intelligent information systems and technologies	IIST6306	5	3
Smart technologies in education	STE6306	5	3
Elective course 5			
Modern project management technologies	MPMT6307	5	3
Project management vethods	PMV6307	5	3
Elective course 6			
Big Data technologies	BDT6308	5	3
Data processing and storage technologies	DPST6308	5	3
Elective course 7			
Interfaces of software systems	ISS6309	5	3
The life cycle of the software	LCS6309	5	3
