Student's Memo

Dear student of "ALIKHAN BOKEIKHAN UNIVERSITY", a catalog of elective disciplines is offered to your attention. This is a systematic list of all optional academic subjects with a brief description. It is designed so that you can quickly, conveniently and comprehensively form an individual learning trajectory. This is an assistant in creating your own curriculum.

In accordance with the credit technology of education, all academic disciplines are divided into three cycles: general education disciplines (GED), basic disciplines (BD) and specialized disciplines (SD). Disciplines in each of these cycles are divided into types: mandatory component, university component and elective component (elective disciplines).

The disciplines of the compulsory component are determined by the state mandatory standard of higher education according and are mandatory for students to study.

Disciplines of the elective component are presented according to the educational program at a meeting of the department with the participation of employers and students. From the entire list of elective courses offered, you can choose the most interesting ones.

The methodology for choosing elective courses using the catalog for inclusion in your individual curriculum is as follows:

1. Find the course and academic semester in the list.
2. Determine the number of credits in an elective subject issued from the structure of the educational program of higher education.
3. Carefully read the list of elective courses offered. Focus on combining academic subjects according to the selected courses. Only one subject can be selected from a group of elective courses.
4. Read a brief description of the elective courses you are interested in and make your choice.
5. Check whether the total number of credits for the courses you have chosen corresponds to the required amount of credit in accordance with the structure of the higher education program.
6. When choosing elective disciplines, use the help of an adviser.

Awarded degree: bachelor of business and management in the educational program "6B04118 Finance"

№ course	Name of the discipline	Number of credits	Prerequisites	Postrekvizity	Brief description indicating the purpose of the study, executive summary, and expected results of the study (knowledge, skills, competencies,)
CYCLE OF BASIC DISCIPLINES					
Component of choice (CC)					
Module 6 Macro environment of the market					
1	Fundamentals of management and marketing	6	Economic theory	Financial management, Bankruptcy and reorganization of the enterprise/ Financial recovery of the enterprise	<p>Content: This discipline reveals the content of management, forms a complex of knowledge about management, develops specific skills for various types of management activities, analysis of management systems and design. By studying the Fundamentals of Management and Marketing, students acquire knowledge and skills of management in market conditions, the basics and concepts of marketing in order to effectively establish communication processes.</p> <p>Expected results:</p> <p>Know: acquire knowledge in the field of management and marketing; use the complex of acquired knowledge to solve all marketing problems; determine the state of the economy, the real state of the company and its position in the market;</p> <p>Be able to: what is an enterprise as an object of marketing activities; what tasks of the firm's practical activities are solved within the framework of the marketing concept;</p> <p>Skills: to possess methods of economic analysis of the behavior of economic agents and markets in a global environment;</p> <p>Competencies: economic and organizational -managerial competencies</p>
1	Market infrastructure	6	Economic theory	Financial management, Bankruptcy and reorganization of the enterprise/ Financial recovery of the enterprise	<p>Content: A discipline that studies the structure of the market, i.e. all subjects of the economy and the relations between them, the system of relations of related institutions, services, enterprises operating within special markets and ensuring the normal mode of their functioning. The discipline studies all economic entities of the market, the relations between them, the needs of markets, the environment of the functioning of markets.</p> <p>Expected results:</p> <p>Know: evaluate the results of the company's marketing activities; the process of forming the market infrastructure in Kazakhstan.</p>

					<p>Be able to: analyze the results of marketing research of enterprises and financial organizations, how to manage internal processes with the help of marketing tools; to form students' knowledge about the features of the current stage of development of the economy of Kazakhstan.</p> <p>Skills: ability to use modern methods of corporate finance management to solve strategic problems, works are the main elements of the market infrastructure.</p> <p>Competencies: economic and organizational -managerial competencies</p>
Module 8 Accounting and analytical module					
2	Fundamentals of economic analysis	4	Economic theory	Financial analysis in the activities of a commercial bank/ Tax management, Analysis of financial and economic activities/Financial analysis, BigData and Business Analytics/ Cloud Computing Services	<p>Content: the discipline studies methods of cognition of economic processes and phenomena. The subject, content and tasks, considering the method and methodology, methods and techniques of economic analysis. Classification of factors, interdependencies and interrelations between them. Modeling the relationship between performance indicators and factors.</p> <p>Expected results:</p> <p>To know: methodological principles of economic analysis, features of the method of economic analysis, the procedure for collecting and preparing analytical information, methods and techniques for conducting analytical calculations</p> <p>Be able to: analyze the results of calculations of financial and economic indicators and substantiate the conclusions; as well as identify economic problems when analyzing specific situations, propose ways to solve them, taking into account criteria of socio-economic efficiency, risk assessment and possible socio-economic consequences, identify and justify the conditions and factors for mobilizing production reserves; determine the financial condition of the organization and the trends of its development.</p> <p>Skills: systematize the main methods of economic analysis, apply methods of comprehensive assessments of the activities of economic entities and their divisions; interpret the results of calculations, as well as possess the skills of modern methods of collecting, processing and analyzing economic and social data necessary for the development of</p>

					plans and justification of management decisions. Competencies: economic, organizational and managerial
2	Functional and cost analysis	4	Economic theory	Financial analysis in the activities of a commercial bank/ Tax management, Analysis of financial and economic activities/Financial analysis, BigData and Business Analytics/ Cloud Computing Services	<p>Content: the discipline studies methods of cognition of economic processes and phenomena. The subject, content and tasks, considering the method and methodology, methods and techniques of economic analysis. Classification of factors, interdependencies and interrelations between them. Modeling the relationship between performance indicators and factors.</p> <p>Expected results: To know: methodological principles of economic analysis, features of the method of economic analysis, the procedure for collecting and preparing analytical information, methods and techniques for conducting analytical calculations Be able to: analyze the results of calculations of financial and economic indicators and substantiate the conclusions; as well as identify economic problems when analyzing specific situations, propose ways to solve them, taking into account criteria of socio-economic efficiency, risk assessment and possible socio-economic consequences, identify and justify the conditions and factors for mobilizing production reserves; determine the financial condition of the organization and the trends of its development. Module 16 Accounting					
6	1C accounting	5	Accounting and auditing	Financial monitoring/ Financial planning	<p>Content: The discipline studies a universal system of automation of the company's activities, designed for accounting and tax accounting and accounting operations; accounting of goods and material assets, settlements with counterparties, payroll, depreciation of fixed assets, accounting for any sections for the formation of high-quality and timely information about the financial and economic activities of the entity, functions and capabilities of the software "1C Accounting" for the organization and accounting at the enterprise. Preparation of regulated and tax reporting forms</p> <p>Expected results:</p> <p>Know: the main types of accounting automation in enterprises. The technology of accounting in the software environment 1C: Accounting.</p> <p>Be able to: use automated accounting and reporting programs (1C-Accounting) to keep records of cash transactions. Maintain accounting and tax records, generate financial and regulated reports</p> <p>Skills: work in a typical configuration "Enterprise Accounting" of the "1C: Enterprise" system.</p> <p>Competencies: professional.</p>
6	Parus 8 accounting	5	Accounting and auditing	Financial monitoring/ Financial planning	<p>Content: The discipline studies a software product for automating the activities of public and budgetary sector organizations, whose sources of financing activities are budgetary (and extra-budgetary) funds. Compilation of the business process of accounting, calculation and payroll, maintenance of the necessary normative reference information (budget classification codes) of personnel management and business processes, formation of regulated reporting and tax cards of budgetary and state institutions, closing of accounting period data, control and analysis of actual budget execution</p> <p>Expected results:</p> <p>Know: the basic terminology of the beginning and end of the system, setting parameters, the formation, accounting and reflection in the accounts of budgetary accounting, banking documents.</p> <p>Be able to: use automated</p>

					<p>accounting and reporting programs to keep records of cash transactions. launch the "administrator" application; set the current date, general system settings, register business transactions, close the accounting period.</p> <p>Skills: work with counterparties, bank and cash documents, registration of business transactions on an extract from a personal account in the treasury.</p> <p>Competencies: professional.</p>
Module 14 Financial and analytical module					
7	Financial statistics	4	Statistics	Analysis of financial and economic activities/ Financial analysis	<p>Content: The discipline forms knowledge about the subject and methods of financial statistics, the content of state budget statistics, statistics of financial reserves of enterprises and branches of the national economy, statistical indicators of financial reserves in industry, financial results in the sectors of commodity circulation of public product, the content of money circulation statistics, banking statistics, securities statistics, insurance statistics, exchange rate statistics.</p> <p>Expected results:</p> <p>Know: methods for calculating economic and socio-economic indicators based on standard methods, taking into account the current regulatory framework.</p> <p>Be able to: draw up statistical reports on the activities of financial and banking organizations, choose tools for processing economic data in accordance with the task, analyze the results of calculations and justify the conclusions; analyze and interpret domestic and foreign statistics on socio-economic processes and phenomena, identify trends in socio-economic indicators;</p> <p>Skills: use of modern technical means and information technologies for solving analytical and research problems.</p> <p>Competencies: special</p>
7	Banking statistics	4	Statistics	Analysis of financial and economic activities/ Financial analysis	<p>Content: The discipline forms theoretical approaches, mechanisms and methods of application and collection of statistical indicators, the subject and tasks of banking statistics. Forms a system of statistical indicators of money circulation, macroeconomic indicators, based on statistical methods of analysis and forecast of the money supply and money</p>

					<p>circulation.</p> <p>Expected results:</p> <p>Know: methods for calculating economic and socio-economic indicators based on standard methods, taking into account the current regulatory framework.</p> <p>Be able to: draw up statistical reports on the activities of financial and banking organizations; collect the necessary data, analyze them and prepare an information review and / or analytical report.</p> <p>Skills: use of modern technical means and information technologies for solving analytical and research problems.</p> <p>Competencies: special</p>
Module 14 Financial and analytical module					
8	Big Data and business analytics	4	<p>Financial management</p> <p>Financial analysis in the activities of a commercial bank/ Tax management</p>	<p>Analysis of financial and economic activities/ Financial analysis</p>	<p>Content: The purpose of the discipline is to study technologies, methods and tools used to provide and manage cloud-computing resources that will be able to design, implement and manage cloud-computing systems in various areas of business and information technology. The discipline is aimed at studying theoretical and practical knowledge of cloud computing technology, developing skills and practical realization of the benefits of cloud services in modern business, studying tools and artificial intelligence to create intelligent automation of processes in the cloud and without human intervention</p> <p>Expected results:</p> <p>To know: network models of cloud services and features of cloud architecture design, basic concepts and terminology of cloud technologies; areas of application of cloud technologies; the concept of cloud computing in relation to business activities; to know the basic principles of cloud computing, principles and methods of application development for cloud systems using various platforms; cloud computing infrastructure;</p> <p>Be able to: choose software tools for data analysis and cloud services, describe the possibilities of using information technologies and an innovative approach; manage and store data, determine the stages of transition to a multi-tenant, dedicated, customizable, multi-tenant architecture, use cloud programming techniques, evaluate the effectiveness of application, long-term prospects,</p>

					<p>study the economics of cloud computing; Skills: to design algorithms, models and methods for software and cloud architectures, to create models for the organization of multi-tenant data storage, software development of cloud systems, system administration for the development and maintenance of applications deployed in the clouds</p> <p>Competencies: professional.</p>
8	Cloud computing services	4	<p>Financial management Financial analysis in the activities of a commercial bank/ Tax management</p>	<p>Analysis of financial and economic activities/ Financial analysis</p>	<p>Content: The purpose of the discipline is to study technologies, methods and tools used to provide and manage cloud computing resources that will be able to design, implement and manage cloud computing systems in various areas of business and information technology. The discipline is aimed at studying theoretical and practical knowledge of cloud computing technology, developing skills and practical realization of the benefits of cloud services in modern business, studying tools and artificial intelligence to create intelligent automation of processes in the cloud and without human intervention</p> <p>Expected results:</p> <p>To know: network models of cloud services and features of cloud architecture design, basic concepts and terminology of cloud technologies; areas of application of cloud technologies; the concept of cloud computing in relation to business activities; to know the basic principles of cloud computing, principles and methods of application development for cloud systems using various platforms; cloud computing infrastructure;</p> <p>Be able to: choose software tools for data analysis and cloud services, describe the possibilities of using information technologies and an innovative approach; manage and store data, determine the stages of transition to a multi-tenant, dedicated, customizable, multi-tenant architecture, use cloud programming techniques, evaluate the effectiveness of application, long-term prospects, study the economics of cloud computing; Skills: to design algorithms, models and methods for software and cloud architectures, to create models for the organization of multi-tenant data storage, software development of cloud systems, system administration for the development and maintenance of</p>

					applications deployed in the clouds Competencies: professional.
Module 17 Fundamentals of enterprise management					
9	Professional values and ethics of the financier	5	Money, credit and banks, Corporate finance	Financial monitoring/ Financial planning, Manufacturing practice III	<p>Content: The discipline forms knowledge of ethical norms of behavior in various conditions and circumstances, the main models of moral behavior and communication of financiers and their manifestations in professional activities; the ability to build interpersonal relationships in the business sphere, organize business events, prevent conflicts, skills of conducting business conversations, negotiations with a high level of psychological culture and making managerial decisions.</p> <p>Expected result:</p> <p>Know: historical, philosophical and socio-cultural traditions of the formation of ethics as a science; the structure and main functions of modern professional ethics; the essence of morality and its interpretation in various ethical theories; the specifics of the manifestation of moral values in professional activities, in the family and everyday life; forms and norms for the implementation of business etiquette in professional activities.</p> <p>Be able to: justify their spiritual, moral and life positions; affirm the principles of justice, freedom and responsibility in the performance of their professional and civic duty; improve their moral qualities; use the principles and methods of professional ethics to evaluate various social and professional phenomena and processes; reasonably express their views and judgments on the problems of professional ethics; apply the norms and rules of business etiquette in professional activities.</p> <p>Skills: to show communication skills, by mastering the norms of behavior in professional activities, independent work with literature and other sources on the theory and practice of professional ethics and etiquette; opposition, dialogue and discussions on the content of moral values in professional ethics; compiling a moral characterization of the personality of a business partner.</p> <p>Competencies: special</p>
9	Ethics of business communication	5	Money, credit and banks, Corporate finance	Financial monitoring/ Financial planning,	<p>Content: The discipline studies modern speech etiquette, norms of literary language, methods of modeling texts, requirements for</p>

				Manufacturing practice III	<p>the construction of the main compositional parts of speech, logical organization of speech; according to the results of studying the discipline, the student is able to conduct a constructive dialogue, speak publicly, build his speech in accordance with the communication situation, use rhetorical techniques in various communication situations, apply methods of holding the audience's attention.</p> <p>Expected result:</p> <p>Know: the current state of the theory of organizational behavior and trends in its development; the basics of personal development in the organization; factors of group behavior in the structures of state and municipal government; features of communicative behavior in state organizations and local government organizations; principles of effective team formation; general approaches to the formation of the organizational culture of civil servants;</p> <p>Be able to: carry out a scientific analysis of the phenomena and processes of social practice; direct organizational behavior to solve professional problems; to form and improve the organizational culture in the structures of state and municipal government.</p> <p>Skills: to show communication skills, by mastering the norms of behavior, as well as the norms of behavior in professional activities, analysis of relationships in a professional group; building interpersonal relationships; solving real behavioral problems; management of the behavior of the individual and the group to improve the efficiency of the organization.</p> <p>Competencies: special</p>
Module 17 Fundamentals of enterprise management					
10	Bankruptcy and reorganization of the enterprise	5	Corporate finance, Fundamentals of management and marketing/ Market infra- structure	Financial monitoring/ Financial planning	<p>Content: The discipline forms knowledge of the main bankruptcy procedures, systems of regulatory legal acts regulating the consideration of insolvency cases; the ability to assess the anti-crisis situation of the enterprise, differentiate the requirements for ensuring the consideration and resolution of insolvency cases, navigate the legislation regulating the procedure for considering bankruptcy cases of the enterprise, the skills of making the right financial decisions in various areas of the enterprise's functioning.</p> <p>Expected results:</p> <p>Know: the theory and practice</p>

					<p>of bankruptcy of a corporation in a market economy, the features of the reorganization of corporations of various forms of ownership and management; motives and mechanisms for the implementation of mergers and acquisitions</p> <p>Be able to: navigate the legislation governing the procedure for considering bankruptcy cases of an enterprise, assess the anti-crisis situation of a corporation; evaluate the effectiveness of transactions for the transfer of corporate control; analyze various factors and indicators of the company's operating and financial activities that affect the M&A strategy;</p> <p>Skills: making the right financial decisions in an unstable economy in various areas of the corporation's functioning estimates of the company's value to determine the feasibility of concluding a specific M&A transaction; using the basics of legal, tax and accounting aspects of mergers and acquisitions; application of managerial decisions, assessment of their possible consequences and bear responsibility for them;</p> <p>Competencies: special.</p>
10	Financial recovery of the enterprise	5	Corporate finance, Fundamentals of management and marketing/ Market infra- structure	Financial monitoring/ Financial planning	<p>Contents: Purpose: to form a complex of knowledge necessary for students to: - analyze modern problems in the field of management in a crisis; - research of the influence of the processes of financial recovery of the enterprise on the dynamics of economic growth; - practical implementation of a set of measures for the financial recovery of the enterprise in the conditions of financial and monetary relations of counterparties; - development of anti-crisis management methods, both at the state level and at the level of a single enterprise.</p> <p>Expected results:</p> <p>Know: sources of value creation and destruction in transactions of horizontal, vertical integration and corporate expansion; features of company valuation in international M&A and be able to apply them in practice.</p> <p>Be able to: analyze various ways of restructuring a company, evaluate the appropriateness of their use in each specific situation.</p> <p>Skills: own the methods of calculating financial stability, solvency in order to determine the</p>

					<p>likelihood of bankruptcy, overcome the insolvency of organizations and financial recovery of enterprises; set, broadcast legal and ethical standards in professional and social activities; use of specific methods and tools for building financial models; use of methods, techniques and techniques for presenting results; communications for the presentation of restructuring strategies using specific methods of situation analysis.</p> <p>Competencies: special</p>
Module 17 Fundamentals of enterprise management					
11	Analysis of financial and economic activities	4	<p>Fundamentals of economic analysis/ Functional and cost analysis, BigDate and Business Analytics/ Cloud Computing Services, Financial analysis in the activities of a commercial bank/ Tax management, Financial statistics/ Banking statistics</p>	<p>Financial monitoring/ Financial planning, Manufacturing practice III</p>	<p>Content: The purpose of the discipline is to teach the methods and tools necessary to analyze the financial and economic activities of organizations in order to identify their financial condition, efficiency and development prospects. The discipline is aimed at studying the main economic phenomena and processes that make up the content of the analysis of the financial and economic activities of the enterprise, indicators of competitiveness and financial stability, solvency and profitability of the enterprise; analyzing the financial and economic activities of organizations, evaluating the effectiveness of the use of production and financial resources; having the skills to assess current and future financial flows</p> <p>Expected results:</p> <p>Know: the essence of the main economic phenomena and processes that make up the content of the economic activity of the enterprise, their relationship and interdependence; modern methods of economic research of the economic activity of enterprises, which are used at different stages and directions of its complex analysis, including methods of factor analysis, functional cost analysis, marginal analysis; subject relationships of the theory of economic analysis with economic theory, management, finance, statistics, accounting.</p> <p>Be able to: analyze the financial and economic activities of the enterprise, including own methods for calculating financial stability, select a methodology and carry out analytical calculations based on accounting, statistical and operational accounting data; evaluate the results of the enterprise, taking into account</p>

					<p>earlier decisions; determine the causes and factors affecting the economic performance and financial condition of the enterprise. Identify reserves for improving the efficiency of the enterprise and develop practical recommendations based on them. analyze the financial condition of an economic entity; analytically process financial statements in order to make management decisions and obtain an assessment of the effectiveness of the functioning of the organization (enterprise); calculate and correctly evaluate the value of financial ratios characterizing the financial condition of the organization (enterprise); identify internal reserves to strengthen the financial condition of the analyzed entity; independently choose the best option for solving economic and financial situations; make reasoned conclusions and proposals based on the results of the analysis done in order to improve the efficiency of the organization (enterprise);</p> <p>Skills: concepts of analysis of financial and economic activities of enterprises; methods of analysis of financial statements and financial forecasting; methods for assessing current and future financial flows; methods of management and evaluation of the capital structure.</p> <p>Competencies: special</p>
11	Financial analysis	4	<p>Fundamentals of economic analysis/ Functional and cost analysis, BigData and Business Analytics/ Cloud Computing Services, Financial analysis in the activities of a commercial bank/ Tax management, Financial statistics/ Banking statistics</p>	<p>Financial monitoring/ Financial planning, Manufacturing practice III</p>	<p>Content: Discipline studying the contents, meaning and classification of complex economic analysis, financial reporting, analysis, financial situation of the organization and assessment of efficiency of use of assets, analysis of sources of financing economic activities of the organization, analysis of solvency and liquidity, financial stability, financial results and profitability, evaluating their efficiency, financial efficiency analysis of projects, business and market activity, methods of analysis of the financial condition of the company</p> <p>Expected results: Know: techniques and methods of financial analysis, scientific foundations of financial analysis; content, purpose, objectives, methods and techniques of financial analysis in organizations (enterprises); sources of analytical</p>

					<p>information; a system of absolute and relative financial indicators characterizing the availability, placement and efficiency of the organization's (enterprise's) financial resources; method of express analysis and in-depth financial analysis.</p> <p>Be able to: analyze the financial and economic activities of the enterprise, use analysis techniques, practical skills in calculating and evaluating the main indicators of the enterprise, identifying reserves and developing measures to improve the economic mechanism.</p> <p>Skills: carrying out analytical procedures and generalizations in their future scientific or practical activities; practical application of financial analysis of companies' activities and Possess skills: methods of calculation and analysis of retail, wholesale, prices.</p> <p>Competencies: special</p>
Module 18 Financial management					
12	Customs business	5	Taxes and taxation/ The Tax law of the Republic of Kazakhstan,	International monetary and financial relations/ Financial control and audit	<p>Content: The discipline forms the knowledge of the conceptual apparatus in the field of customs affairs; the structures of the customs service; the ability to choose suppliers taking into account preferential customs regimes, use preferential customs regimes, design safe supply chains; analyze shipping documents, fill out a customs declaration, skills for identifying, preventing and suppressing administrative offenses and crimes in the field of customs affairs.</p> <p>Expected results:</p> <p>Know: procurement legislation and its control, principles and methods of monitoring and auditing in the field of procurement of goods, works and services, in the functions, rights and obligations of state governing bodies and local self-government bodies responsible for legal regulation and control in the budget system;</p> <p>Be able to: monitor, audit and control in the field of procurement of goods, works and services, apply methods and forms of budgetary control; use financial documents for budgetary control;</p> <p>Skills: analyze shipping documents, fill out a customs declaration, be able to work with legislation in the field of</p>
