Department of Business and management

CATALOGUE OF ELECTIVE COURSES

6B04119 State and local government
Year of admission – 2024
The term of study is 2 years

Semey, 2024

Reviewed and approved at the meeting of the Educational and Methodological Council of the Faculty
(Protocol No. 4 dated 15/03/2024)

Approved at the meeting of the Educational and Methodological Council of the University
(Protocol No. 5 dated 05/28/2024)

Dear student of "ALIKHAN BOKEIKHAN UNIVERSITY", a catalog of elective disciplines is offered to your attention. This is a systematic list of all optional academic subjects with a brief description. It is designed so that you can quickly, conveniently and comprehensively form an individual learning trajectory. This is an assistant in creating your own curriculum.

In accordance with the credit technology of education, all academic disciplines are divided into three cycles: general education disciplines (GED), basic disciplines (BD) and specialized disciplines (SD). Disciplines in each of these cycles are divided into types: mandatory component, university component and elective component (elective disciplines).

The disciplines of the compulsory component are determined by the state mandatory standard of higher education according to the educational program and are mandatory for students to study.

Disciplines of the elective component are presented according to the educational program at a meeting of the department with the participation of employers and students. From the entire list of elective courses offered, you can choose the most interesting ones.

The methodology for choosing elective courses using the catalog for inclusion in your individual curriculum is as follows:

1. Find the course and academic semester in the list.
2. Determine the number of credits in an elective subject issued from the structure of the educational program of higher education.
3. Carefully read the list of elective courses offered. Focus on combining academic subjects according to the selected courses. Only one subject can be selected from a group of elective courses.
4. Read a brief description of the elective courses you are interested in and make your choice.
5. Check whether the total number of credits for the courses you have chosen corresponds to the required amount of credit in accordance with the structure of the higher education program.
6. When choosing elective disciplines, use the help of an adviser.

Awarded degree:
Bachelor of Business and Management

Educational program:
6B04119 State and local government

Component No. of choice	Name of discipline or module	Number of credits	Prerequisites	Postrequisites	Brief description indicating the purpose of the study, brief content and expected learning outcomes (knowledge, skills, competencies)
BASIC DISCIPLINES					
Selectable Components (CV)					
Module 10. . Module fundamentals of analysis and management					
1	Fundamentals of Management and Marketing	6		corporate management, strategic management, Organization and regulation of labor, Human economics, Theory of public administration on industrial practice I	<p>Content: This discipline reveals the content of management, forms a complex of knowledge about management, develops specific skills for various types of management activities, analysis of management systems and design. By studying the Fundamentals of Management and Marketing, students acquire knowledge and skills of management in market conditions, the basics and concepts of marketing in order to effectively establish communication processes.</p> <p>Expected results: To know: the theoretical foundations of the management system, the role and place of management and marketing elements in the production system; the historical stages of the development of management theory and practice, the features of national schools of management and marketing; classical management functions and tools for their implementation in practice; economic and social aspects of the effectiveness of management and marketing Be able to: develop organizational goals; apply the knowledge gained in the learning process to make managerial decisions taking into account economic, social, technical and other factors; analyze organizational relations in the management system; model managerial situations; determine the factors of management and marketing effectiveness Skills: personal and team management; structuring goals and defining strategies and tactics for achieving goals; developing measures to improve the effectiveness of the organization Competencies: economic, organizational and managerial.</p>
1	Market infrastructure	6		corporate management, strategic management, Organization and regulation of labor, Human Economics, Theory of public administration, Field Practice I	<p>Content: a discipline that studies the structure of the market, i.e. all economic entities and the relations between them, the system of relations between related institutions, services, enterprises operating within special markets and ensuring the normal mode of their functioning. The discipline studies all economic entities of the market, the relations between them, the needs of markets, the environment of the functioning of markets.</p> <p>Expected results: To know: the patterns of functioning of the market and market infrastructure; the essence and role of the commodity market infrastructure in modern socio-economic conditions; elements of the market infrastructure, their tasks and functions; features of business interaction of market infrastructure entities Be able to: make forecasts of the development of the market situation; use the information obtained as a result of market research; determine which services of the subjects of the commodity market infrastructure should be resorted to in the prevailing market situations; correctly use the features and</p>

					<p>advantages of the subjects of the market infrastructure in specific conditions; find rational options for the movement of goods</p> <p>Skills: to master the methods of analyzing the micro-, meso-, macro-, mega-economic situation; an idea of the current state of the market infrastructure in the state</p> <p>Competencies: economic, organizational and managerial.</p>
Module 10. . Module fundamentals of analysis and management					
2	Fundamentals of Economic Analysis	4	Economic theory, statistics	BigDate and business analytics , Cloud computing services, field trip I	<p>Contents: the discipline studies the methods of cognition of economic processes and phenomena. Subject, content and tasks, considering the method and methodology, methods and techniques of economic analysis. Classification of factors, interdependence and interrelationships between them. Modeling the relationship between performance indicators and factors.</p> <p>Expected results of the study:</p> <p>Know: methodological principles of economic analysis; – features of the method of economic analysis; – content (main sections) of the analysis methodology; – requirements for the initial information for analysis; - the procedure for preparing analytical information; - methods and techniques for conducting analytical calculations, classification of factors, interdependencies and relationships between them, modeling the relationship between performance indicators and factors.</p> <p>Be able to: correctly formulate an analytical problem; – to build multifactorial systems; - apply methods for identifying the influence of factors on the change in the performance indicator;</p> <p>Skills: apply methods of complex assessments of the activities of economic entities and their divisions; – interpret the results of calculations</p> <p>Competences: economic and organizational and managerial</p>
2	Functional cost analysis	4	Economic theory, statistics	BigDate and Business Intelligence , Cloud Computing Services Field Trip I	<p>Contents: the discipline studies the basics of the theory and practice of conducting functional-value analysis, develops skills in using methods and algorithms for conducting functional-value analysis of various objects using various analysis techniques. Identification of the key problems of saving material, labor and money at various stages of the life cycle of products, the maximum use of intra-production reserves, the formation of professional competence in the field of resource saving in market economic conditions.</p> <p>Expected results of the study:</p> <p>Know: the history of the development of the FSA in our country and abroad, the sequence of actions when carrying out work on the FSA. technology of work, basic methods, new forms of analysis, areas of its application.</p> <p>Be able to: conduct research aimed at setting tasks for creating or improving an object, to find ways to perform functions. - solve problems formulated at each stage of the FSA. - to implement the received solutions.</p> <p>Skills: the use of methods and algorithms for conducting a functional cost analysis of various objects using various analysis techniques, achieving the optimal ratio between the useful effect of an object and the total costs for its life cycle; finding completely new technical solutions through the use of a functional approach; reducing the consumption of various types of resources by stages of the life cycle of an object due to the elimination or reduction of auxiliary and harmful (unnecessary) functions of the object.</p> <p>Competences: economic and organizational and managerial</p>
Module 12 Public Services Module					

3	State procurements	5	Microeconomics	State asset management, Kazakhstan and regional integration processes	<p>Content: the discipline studies the theoretical and legal foundations of the contract system in the field of procurement of goods, works and services for public needs, the theoretical, legal and practical foundations for the formation and functioning of the national contract system of public procurement, the stages and features of its development, foreign experience in procurement.</p> <p>Expected learning outcomes:</p> <p>Know: the current legislation of the Republic of Kazakhstan and other regulatory legal acts on the contract system in the field of procurement of goods, works, services to meet public needs; theoretical and legal foundations of the contract system in the field of procurement of goods, works and services for public needs, procedure for planning the procurement of goods, works, services; basic provisions on the goals, objectives and content of actions aimed at ensuring state needs, compliance with ethical and legal norms; the current mechanism for monitoring compliance with the legislation of the Republic of Kazakhstan and other regulatory legal acts on the contract system in the field of procurement of goods, works, services to meet public needs.</p> <p>Be able to: identify current problems in relations aimed at meeting public needs in order to increase the efficiency and effectiveness of the procurement of goods, works, services, ensure publicity and transparency, use the main methods of problem analysis; clearly formulate socially significant goals; give a general rationale for management decisions, taking into account legal and ethical standards, personal responsibility for the results; conduct a comparative analysis of the organization of procurement for public needs in different countries;</p> <p>Skills: skills of independent research in the field of public procurement; theoretical and methodological methods of studying modern problems in the field of public procurement; basic practical skills in planning management decisions and assessing their consequences in the context of priorities for the efficiency and effectiveness of procurement, ensuring the stimulation of innovation and competition, the method of actuarial calculations in order to select options for models for the development of the public procurement system and sources of their financing;</p> <p>Competencies: professional</p>
3	State monitoring	5	Microeconomics	State asset management, Kazakhstan and regional integration processes	<p>Content: this discipline forms knowledge in the field of maintaining, monitoring, providing electronic services to subjects of the public procurement system, compiling a consolidated analytical report, compliance with legislation and procurement procedures by specific customers, conducting an audit in the field of procurement, assessing the validity and effectiveness of budget expenditures, monitoring to identify and suppression of specific violations</p> <p>Expected results of the study:</p> <p>Know: theoretical foundations of state monitoring; goals and objectives of state monitoring; legal and methodological bases for conducting state monitoring; powers, competence of subjects of state monitoring; conducting an audit in the field of procurement, assessing the validity and effectiveness of budget expenditures, ways, forms and methods of carrying out control measures in areas state monitoring; responsibility system.</p> <p>Be able to: determine the boundaries of the rights, duties and competences of public authorities</p>

					<p>monitoring; apply methods and forms of state monitoring; use financial documents for state monitoring, use financial statements for the purpose of carrying out control measures; determine the types of violations of the law and measures of responsibility for these violations.</p> <p>Skills: practical skills in preparing documentation for the preparation for the control event; practical skills in preparing documentation for the implementation of control</p> <p>Events; practical skills in documenting the results of inspections, audits, supervisory events;</p> <p>Competencies: professional</p>
Module 18 The module is professional					
4	Office work in state bodies	5	Professional Kazakh (Russian) language	Quality management of public services, Social sphere of the economy of Kazakhstan	<p>Content: the discipline studies the general characteristics of the modern legislative and normative - methodological support of office work in public authorities. Methods for organizing work with documents, the basics of building information systems, types of control over the execution of documents and instructions, as well as labor relations of civil servants. Designing local regulatory and methodological documents for office work in public service systems.</p> <p>Expected results of the study:</p> <p>Know: the requirements for the execution of official documents, methods of organizing work with documents, the basics of building information systems, types of control over the execution of documents and instructions, as well as labor relations of civil servants.</p> <p>Be able to organization of work with documents depending on the organizational structure, management, volume of document circulation of organizations; to design local regulatory and methodological documents on office work in public service systems.</p> <p>Skills: registration of the main organizational and administrative documents of organizations;</p> <p>Competences : professional</p>
4	business correspondence	5	Professional Kazakh (Russian) language	Local government , Project management	<p>Content: The discipline studies lexical and grammatical features, features of structuring monologue and dialogic statements of regional studies, general scientific and professional nature; features of written communication, the terminological conceptual apparatus of summarizing and annotating texts of a professional orientation is developing; business writing skills; skills of public speech and participation in discussion and controversy</p> <p>Expected results of the study:</p> <p>Know: requirements for formalization of official documents, lexical and grammatical features, features of structuring monologue and dialogic statements of regional studies, general scientific and professional nature</p> <p>Be able to: organization of work with documents depending on the organizational structure, management, volume of document circulation of organizations;</p> <p>Skills: registration of the main organizational and administrative documents of organizations;</p> <p>Competences: professional</p>
Module 13 Governance in an organization					
5	Organization and	4	Fundamentals of Accountin	Economics of the enterprise ,	<p>Content: the discipline studies the essence of labor organization and the need to improve it on a scientific basis, while considering the task of minimizing costs in the production of a competitive</p>

	regulation of labor		g and Auditing, Fundamentals of management and marketing, Market Infrastructure Local Government, Project Management and	Economics of organizations, Planning and budgeting system, In-house planning and budgeting production practice II	product. Rationing and optimization of the number of civil servants in the Republic of Kazakhstan. Practical methods, organization of labor processes, structure, content of labor of workers, organization and regulation of labor. Expected results of the study: Know: economic fundamentals of the functioning of the enterprise; composition and structure of economic resources; methods of assessing the results of economic activity of the enterprise, rationing and optimization of the number of civil servants in the Republic of Kazakhstan, practical methods, organization of labor processes, structure, content of labor of employees, organization and rationing of labor.
